

QHMC Legacy and Alternative Fuels Committee

## Hybrids, EVs, Batteries and Alternative Fuels: Call for Questions

David Baggs\*

At the April General Meeting, a committee was formed to deal with issues arising from both the potential long term reduction of access to fossil fuels and to research and present reliable information on the current state of play regarding hybrid and electric vehicles and batteries and other alternative fuel and energy sources used in vehicles.

As part of this process, at its first meeting the committee determined to poll member clubs to seek input on the issues of concern to all members, in order to collect and collate a single list of issues, concerns and questions to be addressed by the committee and then published to members.

To this end, a questionnaire has been developed that will, on submission, automatically collect and collate all the issues, concerns and questions into a single document and it is accessed via the button on the bottom of the document attached this email.

The committee asks that members complete the form by adding any issues, concerns and questions, and adding their name and contact details in case any clarification is needed by the committee.

Once the form is completed, please just click on the 'SUBMIT' button on the bottom of the form while connected to the internet.

The committee will consolidate the responses and publish the resultant list of issues, concerns and questions and then over time research and publish scientifically accurate and factual responses to address the resultant topics on the list. A preliminary list has been developed by the committee and some issue will be addressed and published soon.

Please consider distributing this email to your members, with a request to submit their questions no later than 30<sup>th</sup> August 2022.
